EFFICIENT POLICY LEADS TO EFFICIENT LEGISLATION—ARKANSAS CAN'T WAIT

R.E. creates more jobs per megawatt hour than any other energy sector.

Investing in renewable energy now will assure lower energy costs in the future.

Renewable energy is clean energy.

Renewable energy will help us meet our growing energy demand.

Investing in renewable energy makes good economic sense.

Renewable energy will increase our energy security.

Investing in renewable energy keeps ratepayer dollars in Arkansas.

Investing in R.E. helps diversify our fuel sources. We currently import of 65% of our energy today.

A feed-in tariff will provide long term contracts.

A feed-in tariff will reward production in the form of a renewable energy payment.

A feed-in tariff is a performance based incentive that rewards the actual generation of electricity.

A feed-in tariff can create four times the energy generation compared to quotas required by a renewable portfolio standard, for 20% less cost.

A FIT reduces the cost of RE by creating a competitive marketplace.

As more renewable energy comes on line, the more competitive the market will be.
